(US Patent 6,144,772) in view of Nakamura (US Pub. 2002/0012126), and in further view of Barker et al. (US Patent 6,646,765), have been fully considered and are persuasive. selection of a sub-zone comprises designation of an arbitrary area of the scanning zone, and wherein the selected compression model defines at least one compression ratio; and an image capturing component adapted to scan the documents in accordance with the received selection of a scanning zone, and further adapted to process a scanned image in accordance with the received selection of at least one sub-zone and received selection of one of a plurality of compression models”, as claimed in **Claim 1**.
